

Trichoptera in Finnish biogeographical provinces

Erkki M. Laasonen, Leena Laasonen & Ola Nybom

Laasonen, E. M., Laasonen, L. & Nybom, O. 1997: Trichoptera in Finnish biogeographical provinces. — Entomol. Fennica 9: 115–135.

The sum of Trichoptera found in Finland is 208 species, after we here report both *Crunoecia irrorata* (Curtis, 1834) and *Apatania stylata* Navas, 1916 as new for the country. Out of the 21 biogeographical provinces there is now altogether 2520 finds, an increase of + 40.1% since the earlier paper dealing with the subject (Nybom 1960). Putting into a graph the latitude of the weighted geographical centre of a biogeographical province, and the sum of Trichopteran species found in it, and calculating a regression line, it comes up that in the north of Finland about 50 species less are found than in the south. In addition, when comparing the actual sums with this regression line, the three provinces with most incomplete investigation work are Al = Åland Islands, Oba = northern Ostrobothnia, southern part, and Ka = southern Karelia, in which the sum of finds are – 32%, – 21%, and – 19% below the regression line, respectively. Recently, the only determination key to Finnish caddisflies built up by the late J. Kyrki, Oulu University, was published in a book for fly fishers (Rinne *et al.* 1995).

1. Introduction

Significant progress in books to determine Trichoptera (Macan & Worthington 1973, Malicky 1983, Katsalova 1987, Rinne *et al.* 1995) and good lists of Finnish Trichoptera (Nybom 1960, Hiilivirta & Laasonen 1984) have initiated promising research on Finnish caddisflies. In this paper we list the old and new observations of Trichoptera in Finnish biogeographical provinces; try to find out the provinces in which a lot of work should still be done; and wish to activate entomologists,

perhaps preferably amateur lepidopterologists, to take up with this group, too.

2. Method

We started with checking the literature on Finnish caddisflies since 1960 (Nybom 1960). The most weighting paper presented a new species: *Oxyethira klingstedtii* Nybom 1983. Many papers dealt with additions or deletions to Finnish fauna (Svensson & Tjeder 1975, Hulden *et al.* 1977, Ny-

bom 1980, Silfverberg 1981 and 1986, Hiilivirta 1982, Leivo 1996) giving a sum of 206 species. New finds from these papers, as well as from those dealing with new provincial finds, were included first.

Thereafter unpublished manuscripts from all Finnish Universities were gathered. In addition, the library of the Finnish Environmental Centre in Helsinki, as well as the 13 regional environmental libraries, were checked for their reports dealing with macro-zoobenthos or bottom fauna of water bodies. As an experiment, all the 192 reports dealing with bottom fauna from Uusimaa Regional Environmental Center were gone through in detail. Trichoptera were mentioned in 47 reports, but only in nine of them the analysis went up to species level. Even then, only few species like *Cyrnus flavidus*, *Molannodes tinctus*, and *Oligotricha striata* (reported as *Phryganea striata*) were notoriously repeated. Three new finds for Uusimaa (N) were found (Mettinen 1994 a, b).

After that public as well as private collections were checked.

Finally an inquiry was sent to 23 persons, who during last 40 years had shown written or verbal activity on Finnish caddisflies. We are very happy to inform, that all of them could find time to answer to our inquiry. Here, as well as in earlier steps, the source which was printed or came to our knowledge first, was prioritized.

The determination of reported specimens was checked only exceptionally. Our lists follow Andersen & Wiberg-Larsen (1987), and Wallace (1991), with no new taxonomic analyses. However, the systematic order of tribes, genera and species by Hiilivirta & Laasonen (1984) were retained, instead of the alphabetic order in the other checklists.

3. Results

The full data is presented in the Table 1 at the end of this paper. In addition, unpublished finds from manuscripts, collections and letters are listed in the Appendix. The major unpublished sources were Collection of Helsinki University with 152 new provincial finds, Coll. (and archives of) Nybom 105 finds, Coll. of Oulu University 88 finds, Coll. Laasonen with 32 finds, letter from M. Hir-

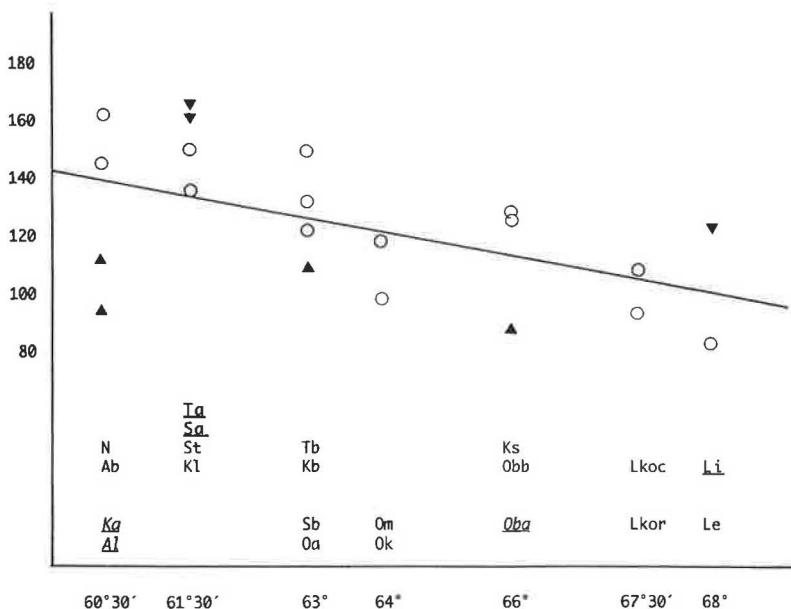

venoja 28 finds, and Coll. of Kuopio Museum 20 finds, respectively.

We report two species new to Finland: *Cru-noecia irrorata* (Curtis, 1834) six specimens from St: Jämijärvi Uhrilähde 10.8.1996 E. Saarela leg. and det. (93) and *Apatania stylata* Navas, 1916, 12 specimens from Ta: Valkeakoski K. Järven-tausta leg. and O. Nybom det. (88). Thus the sum of Trichoptera found in Finland is now 208 species. That means that since 1960 every fifth year a new species has been found. *Athripsodes bili-neatus* was reported twice in manuscripts dealing with pollutions in water bodies, on the basis of a larval find (64,67). However, the determination of *Athripsodes* larvae seems to be very difficult and after discussions with the observers both these finds were omitted.

After omission of the finds from Ka and Kl, which were from an area no more belonging to Finland, the net sum of provincial reports by Nybom is 1799 finds (Nybom 1960). To that we now add 721 finds, i.e. + 40.1%. Out of them, 215 have already been published elsewhere. However, in the papers dealing with environmental surveys of water bodies the new provincial aspect was never mentioned - the finds had to be picked up one by one. We found 506 unpublished or unnoted finds and list them up in the Appendix. Out of the new finds, 166 were in a way technical, i.e. as a result of the split of biogeographical province Ob to Oba and Obb, and province Lkem to Lkoc and Lkor; as well as splitting *Potamophylax "stellatus"* into *P. latipennis* and *P. cingulatus*.

There seems to be much work undone. Looking at the "minuses-in-between" (see Table 1), i.e. the provinces in which a species has not been found, although it is found at least in two neighbouring provinces, we sum up 641 potential finds (25.4% out of 2520), which just await observation. The estimate could be even higher, as the knowledge of e.g. Hydroptilidae seems to be far from perfect. In addition, in the Table 1 there are nine species in which the new find, "the number", leaps more than 200 km, as the crow flies, from the earlier find. However, six of these: *Agraylea cognatella*, *Oxyethira sagittifera*, *O. mirabilis*, *Apatania zonella*, *Limnephilus ignavus*, and *Asynarchus contumax* have clusters of new finds more or less far away; as well two of them *Oxyethira falcata* and *Apatania dalecarlica* are difficult to

Figure 1: The weighted northern latitude of the Finnish biogeographical provinces on the horizontal axis and the sum of Trichoptera species found in them on the vertical axis. The regression line drawn has a correlation coefficient of $r = -0.824$. The provinces with best amount of finds are marked with an inverted triangle (\blacktriangledown) and with **bold**. The underachieving provinces are marked with a triangle (\blacktriangle) and with *italics*.

determine. Once again, we explain the phenomenon as a lack of knowledge. The remaining *Limnephilus subcentralis* has an extension from Ok to Lkor, a leap of 230 km, and could even be a far-distance migrant. But we have never read a note of migration among Trichoptera. And even now, all evidence on migration is totally lacking.

In Fig. 1, we put the northern latitude of the weighted centre of Finnish biogeographical provinces — from 60°30' to 68°30' — and the sum of Trichoptera species found in them, and calculated a regression line. The correlation, $r = -0.824$ is very good and we claim that in the north of Finland about 50 species less is found than in the south. This trend seems to be relatively stable, as a comparison of the provinces with high level of trichopteran investigation gave roughly the same regression. When comparing the actual finds from the provinces with this regression line, we see that the three provinces with most incomplete investigation work are Al, Oba, and Ka, in which the numbers of finds are – 32%, – 21%, and – 19% below the regression line, respectively. Perhaps also Le, – 17%, Oa, – 16%, and Ok, – 15% belong to the underachievers. On the other hand, the investigation of Trichoptera seems to be at a good level in Ta, + 23%, Li, + 21%, and in Sa, + 20%.

No regression was found in a graph at the east-

west direction.

Finally there are 13 species with no new provincial finds, “numbers”, during the last 37 years. These species seem to divide into three: those which are very rare and can be found in southern Finland only, like *Orthotrichia tragetti*, *Oxyethira ecornuta*, *Holocentropus stagnalis*, and *Agrypnetes crassicornis*; or are rare and can be found in the north only, like *Agrypnetes crassicornis* (again!), *Ecclisopteryx dalecarlica*, *Grammotaulius sibiricus*, *Asynarchus impar*, and *Molanna nigra*. The third group is formed by those, whose distribution ceases in the middle of Finland, in Kb, Om, or Obb: *Hydroptila lotensis*, *Ecnomus tenellus*, *Trichostegia minor*, *Limnephilus auricula*, and *Ylodes detruncatus*. In Finland we have no evidence of declining species among Trichoptera, but perhaps they could be found among these groups.

4. Discussion

The use of references and sources was standardized as much as possible and there was no intention to discriminate anybody. On the contrary, the last letters, etc., doubled much of the new finds and made thus our paper more reliable.

On provinces Ka and Kl, the omission of finds from the area, which today belong to Russia, came

somewhat late. It may be that we have not snapped up all substitutive finds. Let that be a partial explanation for low yield at Ka (and Kl , – 12%), and let us assume that the deficiency is corrected in near future. Provinces Oa, Om, Oba, and Obb are all very flat, with few hills and no mountains. This may cause a monotonous profile of water bodies and thus explain the low numbers of finds. But why only at Oa and Oba, when both Om and Obb are above the line? We stick to the hypothesis of a low investigation activity.

A quickly made division of *Potamophylax "stellatus"* was not easy. Obviously it would be worth of another work. As a summary, *P. latipennis* seems to occur everywhere, except in Al, but *P. cingulatus* is lacking in southernmost Finland and perhaps also in farthest NW-corner of Finland, Kilpisjärvi.

Most of the experts seem to have lots of undetermined material both in pin, in refrigerator, and in spirit. Thus we foresee much new information in near future. We are sure that even a haphazard collection of Trichoptera in those incompletely investigated provinces Al, Ka, Oa, Ok, Oba, and Le would lead to new finds, too. Today, the small amount of experts capable of determining Trichoptera is a limiting factor in Finland. However, we are happy to report that a determination key to Finnish Caddisflies has been published in a book for fly fishers (Rinne et al. 1995). We recommend the book, although the key, originally constructed by late Jorma Kyrki at Oulu University, is published in a simplified form, which certainly causes difficulties in some critical genera.

Addendum: During the editorial work of this paper, three interesting papers dealing with Trichoptera have been published in Finnish (Järventausta 1997, Mattila & Salokannel 1997, Saarela 1997). They are put in as references 100–102 at the end of reference list, and their data are included in the Table 1, but not discussed elsewhere.

Acknowledgements. Our thanks go to the following persons, who have given us valuable information: Antti Aalto, Heli Alanne, Anders Albrecht, Pauli Bagge, Mauri Hirvenoja, Erkki Huttula, Heikki Hämäläinen, Juhani Itämies, Siniikka Jokela, Kari Järventausta, Seppo Koponen, Esa Koskenniemi, Keijo Mattila, Jukka Mankki, Lauri Paasivirta, Risto Palomäki, Marja-Liisa Poikolainen, Eeva-Riitta Puomio, Esko Saarela, Juha Salokannel, Eino Savolainen, Antero Suoranta, Sirpa Takalo, Anne Tuorila, Harri Turunen and Kari-Matti Vuori. In addition to good ideas and fruitful

discussions they have contributed to this work with at least 200 working hours.

Table 1: The finds of trichopteran species in Finnish biogeographical provinces. Symbol – means that the species is not found in the respective province. Symbol + means a find reported already in Nybom 1960. New finds after that are shown with a number, which also reveals the reference. If the find data is unpublished, it is presented in Appendix under the same number.

Appendix

The unpublished finds new for the biogeographical provinces are presented here as complete as possible:

- 72) Heikura, R. (see below).
- 60) Huttula, E. (1966, a manuscript). *Psychomyia pusilla* Lkor: Sodankylä Raudanjoki Kurttiokoski 8.7.1994 E.H. leg.
- 61) Hytyläinen, U.-M. (1990, a manuscript). *Ortotrichia costalis* Om: Lestijärvi Vehkalahti 7.-9.6.1989 U.-M. H. leg.
- 62) Krooks, K. (1995, a manuscript). 3 finds, all K.K. leg., *Limnephilus lunatus* Om: Alavieska Kalajoki 21.5.1985, *Chaetopteryx villosa* Om: Kalajoki Jokisuu 14.5. 1984, *Hydatophylax infumatus* Om: Kalajoki 16.5.1984.
- 63) Laasonen, P. (1995, a manuscript). 6 finds, all P.L. leg. *Rhyacophila oblitterata* Ok: Kuhmo 7103:6520 Korkea, Kiekinjoki 1995, *Ithytrichia lamellaris* Ok: Kuhmo 7102:6515 Korkea, Kesselinjoki 1995, *Ceratopsyche silvvenii* Ok: Kuhmo 7103:6520 Korkea, Kiekinjoki 1995, *Silo pallipes* Obb: Pudasjärvi 7305:5220 Sarajärvi Kouvajoki, *Notidobia ciliaris* Ok: Kuhmo 7102:6515 Korkea, Kesselinjoki 1995 and Obb: Pudasjärvi 7310: 5220 Sarajärvi Livojoki.
- 64) Lax, H.-G. (1989, a manuscript). 2 finds, both Oa: Karijoki and H.-G.L. leg. *Hydropsyche contuberalis* Lapväätinjoki Ohrluoma 10.12.1986, *Beraeodes minutus* Kirkonkylä 5.11.1986.
- 65) Luotonen, H. (1988, a manuscript). 4 finds, all H.L. leg. *Rhyacophila fasciata* Om: Kannus Lestijoki Jäväjänkoski 6.1987, *Glossosoma intermedia* Om: Lestijärvi Lestijoki Jatkonkoski 6.1987, *Philopotamus montanus* Om: Kannus Lestijoki Jäväjänkoski 6.1987, *Mystacides niger* Om: Toholampi Lestijoki Kallisenkoski 8.1987.
- 66) Nyman, C. (1993, a manuscript). *Hydropsyche saxonica* Om: Kokkola Perhojoki Skatafors 5.1992 C.N. leg.
- 67) Paasivirta, L. (1993, a manuscript). *Potamophylax latipennis* Ab: Lieto Aurajoen Nautelankosken Myllykoski 4.5.1993 L.P. leg.
- 68) Paasivirta, L. (1996, a manuscript). *Leptocerus tineiformis* Ab: Turku Littoistenjärvi 24.1.1994 L.P. leg.
- 69) Puska, M. (1993, a manuscript). 4 finds, all St.: Merikarvia Lankoski and M.P. leg., *Oxyethira frici* 15.4.1992, *Hydropsyche pellucida* 26.5.1992, *H. siltalai* 15.4.1992, *Halesus tessellatus* 15.4.1992.
- 70) Riihelä, M. (1994, a manuscript). *Cyrnus flavidus* Ok: Kuhmo Elimyssalo Ristonlampi 31.5-3.6.1993 M.R.leg.
- 71) Valovirta, M. (1966, a manuscript). *Chaetopteryx villosa* Tb: Laukaa Leppävesi 1960-1962 M.V. leg.
- 72) Heikura, R. (1986, a manuscript). 3 finds, all from Ks: Salla 752:61 Värriö and R. H. leg., *Holocentropus dubius* 14.-20.7.1979, *Limnephilus flavicornis* 29.-30.8.1978, *L. vittatus* 5.8.-12.9.1978.
- 80) Coll. Zoological Museum, Helsinki University, Helsinki. 152 finds. *Rhyacophila nubila* Oba: Oulu, Vuoren-
- taus leg., *Agraylea multipunctata* Ok: Suomussalmi, W. Hellen leg., *A. sexmaculata* Ab: Pargas, Reuter leg. and N: Helsinge, Palmen leg., *Hydroptila tineoides* Obb: Kemin mlk. Karihaara 30.7.1942 A. Saarinen leg. and Lkoc: Muonio, J. Sahlberg leg., *Ithytrichia lamellaris* Ta: Lammi 19.8.1959 J. Kaisila leg., *Oxyethira tristella* N: Askola 16.7.1969 T. Suomalainen leg. and Ka: Vehkalahti, L. Tiensuu leg., *Stactobiella risi* Sa: Ruokolahti 25.6.1940 O. Nybom leg., *Philopotamus montanus* Ka: Vehkalahti, L. Tiensuu leg., *Psychomyia pusilla* Oba: Uleåborg, Coll. Nylander, *Neureclipsis bimaculata* Lkoc: Muonio, W. Hellen leg., *Plectrocnemia conspersa* St: Vammala 31.7.1970 K. Lahtivirta leg., Obb: Pisavaara naturpark 17.7.1950 N.E. Saris leg., and Lkoc: Muonio 1.7.1948 J. Kaisila leg., *Polycentropus flavomaculatus* Obb: Kemin mlk 4.8.1942 Karihaara A. Saarinen leg. and Lkor: Pelkosenniemi R. Frey leg., *Holocentropus picicornis* Oba: Uleåborg, Coll Nylander and Lkoc: Muonio 14.7.1962 G. Roos leg., *Cyrnus trimaculatus* Ok: Sotkamo 25.7.1954 A. Mikkola leg., *C. crenaticornis* N. Ekenäs lk. Tvärminne 5.9.1928 Klingstedt leg., *Hydropsyche angustipennis* Oba: Uleåborg, Coll. Nylander, Obb: Rovaniemi 27.6.1929 H. Lindberg leg., and Lkoc: Muonio, W. Hellen leg., *Arctopsyche ladiensis* Oba: Oulu, Vuorentaus leg., Obb: Kemijärvi 9.7.1951 J. Carpelan leg., and Lkoc: Muonio 25.6.1925 J. Montell leg., *Agrypnia pagetana* Oba: Hailuoto 11.7.1966 J. Kaisila leg., *A. picta* Lkoc: Muonio 14.7.1962 G. Roos leg., *A. obsoleta* Oba: Oulu, Vuorentaus leg., Obb: Pisavaara nationalpark 20.7.1950 N.E. Saris leg., and Lkoc: Muonio 14.7.1962 G. Roos leg., *Phryganea bipunctata* Obb: Torneå 4.7.1924 H. Lindberg leg., *Oligotricha lapponica* Oba: Hailuoto, Vuorentaus leg., Lkoc: Muonio 734:36 26.6.1976 J. Jalava leg., and Lkor: Sodankylä Mutenia 1.7.1949 J. Kaisila leg., *Oligostomis reticulata* Lkoc: Kittilä Pallasjärvi 12.7.1951 J. Kaisila leg and Lkor: Sodankylä, Euren leg., *Brachycentrus subnubilus* Ka: Vehkalahti 6.6.1964 L. Tiensuu leg., *Lepidostoma hirtum* Obb: Pisavaara naturpark 14.7.1950 N.E. Saris leg., *Apatania wallengreni* Oba: Oulu, Vuorentaus leg., Obb: Kemijärvi 7.7.1951 J. Carpelan leg., Lkoc: Muonio 14.7.1971 E. Suomalainen leg. and Lkor: Sodankylä Tähtelä 6.6.1969 E. Suomalainen leg., *A. stigmatica* Obb: Turtola, J. Sahlberg leg., Lkoc: Muonio 11.8. 1972 E. Suomalainen leg., and Lkor: Saariselkä, B. Poppius leg., *Limnephilus rhombicus* Obb: Rovaniemen mlk Pisa 15.7.1950 H. Lindberg leg., Lkoc: Muonio, Silfvenius leg., and Lkor: Sodankylä Mutenia 1.7.1949 J. Kaisila leg., *L. borealis* Lkoc: Muonio, J. Montell leg. and Lkor: Saariselkä, B. Poppius leg., *L. femoratus* Ab: Karislojo, W. Hellen leg. and Lkor: Saariselkä, B. Poppius leg., *L. marmoratus* Ka: Vehkalahti, L. Tiensuu leg., *L. politus* Obb: Kemi, J. Sahlberg leg. and Lkor: Sodankylä, J. Sahlberg leg., *L. binotatus* Kb: Kitee Juurikka 8.8.1962 V. Makkonen leg., *L. picturatus* Ok: Suomussalmi, W. Hellen leg., *L. sericeus* Oba: Hailuoto 11.7.1966 J. Kaisila leg., Obb: Pisavaara naturpark 1.7.1950 N.E. Saris leg., Lkoc: Kittilä 11.8.1967
