

Brief report

***Netelia arabs* (Strand) new to Israel and *N. caucasica* (Kokujev) new to Sweden (Hymenoptera: Ichneumonidae; Tryphoninae)**

Reijo Jussila

Jussila, R. 2000: *Netelia arabs* (Strand) new to Israel and *N. caucasica* (Kokujev) new to Sweden (Hymenoptera: Ichneumonidae; Tryphoninae). — Entomol. Fennica 11: 140.

The Tryphoninae (Hym., Ichneumonidae) species *Netelia arabs* (Strand) has been informed from Israel and *Netelia caucasica* (Kokujev) from Sweden.

Received 7 March 1999, accepted 9 August 2000

***Netelia arabs* (Strand, 1911)**

Paniscus arabs Strand 1911: 495, ♀.

Netelia arabs (Strand) Delrio 1974: 43, ♂ ♀.

Two male specimens have been found in Israel, Hazem 14.IV.1981 (E. T. Linnaluoto leg.).

The species has earlier been found in Morocco, Algeria, Tunis, Libya, Somalia and Sudan (Delrio 1974).

It belongs to the subgenus *Netelia* Gray and most resembles the species *fuscicornis* (Holmgren, 1858) but is, before all, recognizable by its clearly narrowed temple, white head and stemmaticum and very postfurcal cu-a vein (Delrio 1974).

***Netelia caucasica* (Kokujev, 1899)**

Paniscus caucasicus Kokujev 1899: 134, ♂ ♀.

Paniscus nigrithorax Habermehl 1922: 350, ♂ ♀.

Netelia caucasica (Kokujev) Delrio 1974: 21, ♂ ♀.

1 male specimen has been found in Sweden, Sk: Rovlund 2.IX.-6.X.1984 (N. Ryrholm leg.).

The species has earlier been found in Transcaucasus, Ussuri, Manchuria, France, Germany and Lithuanian (Delrio 1974).

N. caucasica belongs to the subgenus *Paropheltes* Cameron. It is recognizable by its blackish stemmaticum and mesosoma with a reflection bluish (Delrio 1974).
