#### Digitaalisen terveydenhuollon eHealth konferenssi

Suomen Telelääketieteen, e-Health seura, Tampereen yliopisto sekä Pirkanmaan alueella toimivat yhteisöt järjestävät kaksipäiväisen eHealth 2024 konferenssin Tampereella 14.-15.11.2024.

Konferenssin teemana on "From Research to Impact on Digital Health and Welfare Services".

29th #eHealth2024 international conference - From Research to Impact on Digital Health and Welfare Services

Digitalization is rapidly increasing in healthcare. New digital applications and services are constantly emerging. Also, the possibilities of generative artificial intelligence applications, like ChatGPT, in healthcare are attracting interest. There is, however, a need for objective information on what kind of digital services provide actual added value and impact on healthcare. The Finnish Society of Telemedicine and eHealth together with Tampere University are organizing an international congress in November 2024 on the theme 'From Research to Impact on Digital Health and Welfare Services,'

where health care professionals, experts, researchers, and influencers in the field will meet. You are warmly welcome!

#### **Call for abstracts**

Your abstract is an introduction of the development or scientific project in telemedicine, eHealth or digital health, for instance. Novel technological solutions can be presented, too. We are especially interested in international development work.

The conference has sessions in both English and in Finnish. However, submit your abstract in English.

The call for abstracts is from 15 April 2024 until 31 August 2024. Notifications of acceptance will be sent by 22 October 2024 at the latest.

#### **eHealth 2024 conference themes:**

1. From research to impact in digital health and welfare services
  - 2a. Artificial Inteligence
  - 2b. Digitaaliset vastaanotot
