TAPANI HARVIAINEN

A SYRIAC INCANTATION BOWL
IN THE FINNISH NATIONAL MUSEUM, HELSINKI

A Specimen of Eastern Aramaic "Koiné"

Among the antiquities presented by the Iraqi Government to the President of Finland, Dr. Urho Kekkonen, in summer 1977, there is a bowl with an incantation text written in Syriac Estrangolo script.¹ The original catalogue number of the bowl is ξférence (= Mathaf ²Iraqî, Iraqi Museum, Baghdad) 7863. The antiquities are now treasured in the Finnish National Museum (Helsinki) as a gift of President Kekkonen, and the bowl bears the catalogue number VK 5738:3.

The bowl is made of rather coarse, light brown clay. Its diameter measures 18.8-19.1 cm and that of the flat base 6.7 cm, the height is 8.5 cm, and the thickness of sides 1.1 cm. As is usual in incantation bowls, the text is written in spiral form inside of the bowl beginning from the bottom,² a kind of Maltese cross is depicted in the middle of the bottom but there is no circle around it.³ The ink is black. Originally the text seems to have reached the brim of the bowl in 14 coils but two last of them are now almost completely faded and obliterated.

¹ As a rule the incantation bowls written in Syriac letters are called "Syriac bowls" although their language is not always genuine Syriac, cf. V.P. Hamilton, Syriac Incantation Bowls (an unpublished dissertation, Brandeis University, Department of Mediterranean Studies, 1971; Dissertation Abstracts 71-30,130), p. 95-97, and below, p. 26-28.
² In the same manner in this paper I shall call bowls written with Hebrew and Mandaic characters "Jewish bowls", resp. "Mandaic bowls", without referring to any specific Aramaic dialect or to the religion of the writers.
³ For the few exceptions, see Hamilton, p. 7-8.
² Crosses within a circle are usual in Syriac bowls, see Hamilton, p. 8-9.
According to the kind information provided in a letter by the Director of Iraqi Museum, Dr. Subhi Anwar Rashid, the bowl was found together with two more bowls during the construction of a dam in Diyala region on March 29, 1976. The two other bowls have not yet been published.

The contents of the incantation of this H(elsinki)B(owl) do not essentially deviate from corresponding Syriac texts published by MONTGOMERY, TEIXIDOR, HAMILTON, and others. Its closest counterparts are number 6 of Layard-Ellis, number 37 of Montgomery, and especially number 44107 in the Iraqi Museum (henceforth IMB) published by Teixidor. Hamilton has given substantially amended interpretations of these three bowls in his dissertation. Nevertheless, all of them are rather fragmentary, and thus the well-preserved text of HB sheds additional light on a certain scheme of Syriac incantation texts and their linguistic peculiarities.

The Date and Function of Incantation Bowls

According to the general opinion Aramaic incantation bowls date from the Sassanian period, i.e. 3rd-7th centuries AD; there is no evidence for any

---

3 Hamilton, p. 121a-124b, 159-164 (Texts 18-21).
8 My interpretations both of HB and IMB were prepared before I had Hamilton's dissertation at my disposal; thus the agreements and disagreements have come about independently.
9 Among the incantation bowls known to me this scheme occurs in Syriac bowls only.
A Syriac Incantation Bowl

Arabic influence. As for the relative chronology of Syriac bowls, those written in Estrangelo are obviously of more recent origin than the others. In comparison with the letter forms of Hamilton's Estrangelo bowls (nos. 11-15) the types of HB are more in accordance with the true Estrangelo, a fact which seems to date HB as the latest one, i.e. as originating from the 7th century.

That the bowls were used as tools of protective magic, needs no additional proofs. As a rule they have been unearthed in an inverted position, only sometimes facing one another and joined with bitumen at their lips. However, we do not know the manner in which the bowls were considered to repel evil spirits, diseases, etc.

The Script and Spelling

As mentioned above, the script of HB is a rather careful Estrangelo. The only significant deviation is that $d$ has no diacritical dot; $t$ is distinguished from it by the addition of a dot on the top of the character. $y$ has a peculiar form in the suffix $-hy$ where it is depicted as a rather long stroke pointing down and to the left (not to the right as the final $n$). The loop of $t$ is very small and the foot begins from below the line. $d$ is sometimes a circle like $w$, and on the other hand $w$ may occur in a form resembling the figure 9, i.e. $d$. $y$, $n$, and $c$ are partly difficult to distinguish one from another.

2 Hamilton, p. 45-46. Teixidor (p. 62, on the basis of palaeographical features): Estrangelo bowls belong to a latter period than 600 AD.
3 Cf. the tables Syriac Bowl Script in Hamilton, p. 37a-b.
4 It is often claimed that bowls were found under ruins of home foundations but a definitive evidence is lacking, see Hamilton, p. 17-18, but cf. below, p. 16.
5 There are also cases with an inscribed egg inside a bowl, see idem, p. 10-11.
6 They have been explained as prisons or traps of demons (Hyvernat, Montgomery, McCullough), bowls for ritual beverage (Budge), and the overturning as a case of sympathetic magic (Gordon); for details, see Hamilton, p. 7-19, and J. Neusner, A History of the Jews in Babylonia V, Later Sassanian Times (Studia Post-Biblica, Vol. XV, Leiden 1970), p. 218-219, 231-232, 234-235, cf. also below, p. 10, note 6.
7 The symbols $-$ indicate in this paper a grapheme.
There are numerous $t$, $w$, and $y$ letters used to indicate vowel sounds (matres lectionis), e.g. $\text{m}h'dr$ (line 3), $\text{h}wmr'$ (5), $'kyl'$ (8). Same points occur frequently in plural forms but without consistency; probably some of them have only faded away. Linea occultans does not occur in HB nor do any other diacritical marks. For the phonetic spellings, see below, p. 27.

The Text

Since the texts of HB and IMB are almost identical and supplement one another, I have found it convenient to present them one after the other in this publication of HB, all the more reason because on the basis of HB I have been able to read considerably larger parts of IMB than Teixidor and Hamilton were able to.

```
HB:
```

1 For the palaeography and orthography of other Syriac incantation bowls, see Montgomery, p. 32-35, and Hamilton, p. 38-50.
2 The reading is based on the photograph of IMB published in Teixidor, Plate 2, Fig. 3.
3 The line numbers refer to the coils of HB so that a new, numbered line begins with the word which occurs on the supposed radius leading from the centre of the bowl through the start of the text to the brim. The text of IMB has been arranged according to that of HB; a colon indicates the boundary between two coils of IMB counted similarly but, since the beginning is effaced, starting from the end of the text. The line numbers 13, 14, and 15 are located arbitrarily in the end part of IMB. Line numbers with an asterisk mark refer to the text of IMB.
Textual notes on IMB:

1 Hamilton reads before $\text{srw}'$ $\text{u}^2\text{l}\text{kwl.}$ The text deviates here from that of HB.

2 Hamilton: $\text{m}^\text{h}\text{w}^\text{y}^\text{n}^\prime$ "I make known" as in Montgomery 37:7 (= Hamilton, Text 9).

3 Hamilton: $\text{y}'\text{th}$ "it" (obj.). According to Hamilton (p. 60 § 4.13. and p. 92 § 9.11.) the object particle $\text{y}'\text{t}^\text{y}'\text{t}$ occurs in Syriac bowls only in this phrase $d\text{-mqbl}\text{ y}'\text{th}$ (Montgomery, Text 37:7; Layard-Ellis, line 2 = line 5 in Hamilton, Text 10; and here) all of which are his readings.a

4 The emendation of Hamilton $\text{wd}[l]\text{mqbl} \text{r}'\text{z}^\text{y}^\text{y}^\text{m}^\text{t}^\text{k}'\text{ rwmz}'\text{tyn} \text{clysh}$ $b\text{-sy}'\text{lp}'$ (based on Montgomery 37:8) seems to demand a correction which

a Montgomery: $\text{d}^\text{mqbl} \text{'th}$; Layard-Ellis: $\text{d}^\text{mqbl} \text{'lh}$. However, the form $\text{stky}$ $\text{you}$ (fem. obj.) is found in the Estrangello bowl (Die Vorderasiatische Abteilung des Berliner Museums, No. VA 3383) published by M. Lidzbarski (Die Herkunft der manichäischen Schrift, Sitzungsberichte der Berliner Preussischen Akademie der Wissenschaften, Philologisch-historische Klasse, Berlin 1916, p. 1213-1222), p. 1214. The article and the bowl have escaped Hamilton's attention.
is more in conformity with HB and Layard-Ellis a, particularly so in the beginning (w-Š-bšwt' mašil) since the space between $\text{wd}$-$\text{dyw}$ and $\text{mqbl}$, which are visible in the photograph, is too large for $\text{l}$'s only.

5 Hamilton (obviously on the basis of Layard-Ellis, line 2/5): $\text{wb}$-Š-brb' qdmshy b, i.e. qdm in the true Syriac suffixed form which according to him is the only occurrence of this type in Syriac bowls (elsewhere $\text{qdmwh}$, $\text{c1wh}$, etc., see Hamilton, p. 65 § 6.9.).

6 Hamilton: [tqyb]. The plural form is surprising in this context but the ending appears very clearly in the photogaph. On the other hand, interpretation of the first part is far from certain. The word might be nyštbyyn "they (fem., cf. 'ntyn in line 10) will be captured". If the reading could be corroborated by a means of a review of the bowl itself, it would give strong support to the hypothesis that the incantation bowls were considered to be the prisons of demons; this would also mean that the demons were treated with food and drink ('kyl... Š't'), cf. above, p. 5, fn. 6.

7 Hamilton: [w-m$k]$l.

8 The final part of $\text{h}$'s is extraordinary tall as if it were a combination of $\text{y}$'s and $\text{l}$'s, but it is probably an error of the scribe only.

9 Hamilton: $\text{yim} \text{ mn} \text{ bl}$ 'wbkm "peace from Baal your father"; in Montgomery 37:10 he has read equally $\text{yim} \text{ mn} \text{ bl} \ 'wbkm$. $\text{bl}$ 'Baal' does not occur elsewhere in Syriac bowls.

10 Hamilton: $\text{yd} '\text{yc} \ '\text{yl}$ 'im" and earth...". However, $\text{wd}\text{bd}$'s is rather well visible in the photograph and it is followed by $\text{wd}\text{yc}$, a haplography instead of $\text{wd}\text{bd} \text{yc}$, "and seventy".

11 Hamilton supplies nyqbt' referring to the parallel phrase in Montgomery 37:11 (Hamilton, p. 152), but cf. line 11 of HB: "ishtars" only as opposed to line 9: "female ishtars".

12 Teixidor and Hamilton: d-bytql' "of the mysterious voice". In HB, at least, the word is unambiguously $\text{mtql}$'s.

13 Teixidor: $\omega \text{bdw}$t' (?), Hamilton: $\omega \text{bdw}$t" "and the magical action(s)".

14 The word $\text{wd}\text{yc}$'s has been omitted by Hamilton both in his text and autograph.

15 Teixidor: $\omega \text{hm}$' the wines (?),

---

a Layard-Ellis: wš byšwt' m... w"'n... (lines 2-3), but Hamilton: wšbyšwt' mh... ml'kh' ro[glja] 'tn ty[ldh b]şyp'. According to the autograph of Layard-Ellis (p. 521) there is hardly place enough for the emendation of Hamilton.

b Layard-Ellis: nhyp' wqdlh.

c Montgomery: $\text{yim} \text{... bl 'wbkm}$. 
16 Teixidor: sy∂nt' "(the) impious (male idols)..."; Hamilton: ξΥΝΩΤ' "(the) impious (pebble spirits)", obviously his scribal error instead of ΣΥΝΩΤ' mentioned in his glossary (p. 181) with reference to this line.

17 Lacking in Teixidor, Hamilton has ωλ...

18 Teixidor: δ-β-ΣΥΩΜ' "which is in the losses"; Hamilton: δ-β-ΣΥΩΜ' "which are in the losses". However, the reading is uncertain (δ-β-ΣΔΩΝ'?), cf. below, commentary on line 11 of HB, p. 23.

19 Hamilton: ω-ΧΥΩΤ', his scribal error instead of ΧΥΩΤ' mentioned in his glossary (p. 182).

20 ω-ΥΩΔ', both in Teixidor and Hamilton, is very questionable in regard of the reading as well as the meaning "howlers" (cf. Montgomery, p. 81 and 93 on $ywrwn$). Could it be only a dittography of $n(y)dr'$?

21 Teixidor: ω-ΑΓΤ', Hamilton: ω-ΑΓΤ', "the numerous ones". According to Hamilton (p. 190) the only occurrence in Syriac bowls.

22 Lacking in Teixidor, Hamilton has ωυδηγετ (?) without translation.

23 Teixidor and Hamilton: τΩΜΩΝ, a non-Aramaic spelling and form mentioned by Hamilton (p. 82) occurring once, obviously here.

24 Teixidor and Hamilton: δ-ΓΡΒΥ' "(to the mountains) that are near". According to the photograph, however, the first $δς$ has a diacritical dot above it, i.e. it is $ς\delta$, and between $ςβς$ and $ς'ς$ there is no $ςγ$. In addition to that, the expression "the mighty mountains" is more suited to the context, cf. below, commentary on line 13, p. 25.

25 Teixidor has here only ρσρν "you be annihilated" which is the last word of his publication. Hamilton: ρσρν ωμεθ δ' μαίβ "be annulled..."; in the commentary (p. 152) he adds: 'If I read the passage correctly it is "and his son do (sic! T.H.) not receive (?) nor guard with these names".'

26 Hamilton: δ'ΤΥΩ' 'ΥΘ, without translation.

27 Lacking in Hamilton.

28 Hamilton has only κωνήτ' ΩΜΝ... 'ΜΝ (idem, p. 153: I am inclined to think that there is here an attempt to write the alphabet, at least the first part...), cf. below, commentary on line 15, p. 26.

---

b The occurrence, 4:11 (= Montgomery 32:11), mentioned there is not correct.
Translation

(1) This amulet bowl is designated for the salvation and guarding of the house (2) and abode of Farrukhdadh, son of Bawai, and Shishin, daughter of Gushnai, (3) and of Mahbodh and Mahadur GushnasP and Bar Gadbehar, sons of Shishin. The mystery amulet of heaven is buried in heaven (4) and the mystery amulet of earth is buried in earth, and this is the mystery amulet of the house. But I say against the sorceries\(^1\) and against all the magical practices (5) and against all the messengers\(^2\) of the idol-spirits and against the legions and against all the amulet-spirits and the ishtars and against all the demons and the devils and the mighty satans (6) and the mighty liliths, (1) declare this decree unto you: Every one who accepts Yah\(^3\), attains good, but who accepts wickedness, the mystery words (7) come upon him, swords and sabres, and they stand up in front of him and kill him and the fire surrounds him and the flames fall\(^4\) upon him; who hears the decree, he sits\(^5\) (8) in the house, eats and treats food, drinks and treats drink, is glad and makes glad, he is a brother for its people\(^6\) and a friend for the occupants of the house, he is a comrade for the children and called Foster-father, (9) he is a companion for the cattle and called the Good Fortune. Receive (pl.) peace from your Father who is in heaven and seven\(^7\) (greetings of) peace from the male gods and from female\(^8\) ishtars, (from him) who sets (10) victorious peace in (with) his Judgement, who\(^9\) sets the staggering

---

1 IMB: But I say against everything that is in it (= in the house), against..., cf. Montgomery 37:5 (= Hamilton 9:5): 'n' 'ýmr 'al kāl d-ýṭbh 'al ḥr\(\)\(\) etc.
2 The list of evil spirits of IMB deviates from that of HB.
3 IMB: Yahallah, cf. below, commentary on line 6, p. 17-18.
4 IMB: the flame falls.
5 IMB: they will be captured (?), cf. above, p. 10, note 6.
6 IMB: for the people.
7 IMB: and seventy seven.
8 There is no word "female" in IMB.
9 IMB: in (with) the Judgement and who.
destruction in fire. (Magic symbols). Friends... (?)

Moreover you (pl. fem.), spirits and the amulet-spirits, (11) the
liliths and the deceivers and the demons and the devils and the plague-
spirits and the no-good-ones and the evil spirits and the impious amulet-
spirits, the male idol-spirits and the ishtars and the curses and the
accidents and the shames (+ 1 word) (12) (+ 1 word) and the vows and the
trials and the worship and the spells, which are cursed and consumed
and dissolved, go out (+ 2 words), flee...

and the vows and the howlers (?) and the worship and the spells, which
are cursed and consumed and dissolved, go out, evaporate, and be expelled
(excommunicated), flee and pass over (13+) and do not say (anything) but
go to the mighty mountains and to the evil sea and to the evil desert(s).
As a sinful slave who deserts from his Lord (14+) he does not receive
nor retain these names of God. Amen, Amen, Amen, Selah. Sealed is the
salvation to (obliterated names), (15+) the sons and daughters of Gush-
naï. Amen, Amen, Amen, Selah. ABGD HWZ KLMNn S ÇP SQSTt Amen, Amen,
Selah.

Commentary

Line 1:
$qm^{c}y^{i}S$ "amulet (bowl)" is usually spelled $qm^{c}y^{i}S$. $y^{i}S$ and $^{c}S$ are very
similar in the text, but as a rule $^{c}S$ is clearly higher than $y^{i}S$. The
same spelling $qm^{c}y^{i}S$ occurs in Syriac bowls also in IM 50327 (line 1),
and in the bowl of Lidzbarski; in addition to them, there is $qm^{c}y^{i}S$ in

1 IMB: A friend of (?), cf. below, commentary on line 10, p. 22.
2 IMB: and the.
3 IMB: the female ishtars.
4 See Montgomery, p. 44 and 301.
5 Teixidor (p. 53): $m/qm^{c}/ly^{i}S$; Hamilton (Text 12:1): $qm^{c}y^{i}S$.
6 Lidzbarski 1916, p. 1214.
the bowl published by Montgomery in 1918.\(^1\) The Mandaic form of the word is $q\text{maha}$,\(^2\) and in a Jewish bowl "amulet" is spelled $q\text{my}$\(^3\). All of these irregular forms reveal the same trend of development, viz. the confusion of laryngeal consonants, a phenomenon well attested in Mandaic and Jewish Eastern Aramaic\(^4\) and occurring sporadically also in other Syriac bowls.\(^5\) Cf. below, p. 26-27.

$'\text{sywt}'$ is the genuine Syriac form ('āsyūtā')\(^6\) instead of $'\text{swt}'$ occurring in other bowls.\(^7\)

Line 2:

$md\text{wrt}'$ is not found in Syriac dictionaries.\(^8\) However, it has an exact counterpart $md\text{urta}$ "dwelling(-place), lodging" in Mandaic ($\text{vdr}$).\(^9\)

$pr\text{wkd}'d$ = Persian Farux$\text{v}d$ah.\(^10\)

$'\text{by}$, cf. $'\text{by}$ in IM 23776:2,5,8,12\(^11\) and $'\text{by}$ in Hamilton 19:1.\(^12\)

---

4 See e.g. Macuch, p. 79-80.

8 $md\text{wrt}'$ = "partus, generatio" mentioned by R. Payne Smith (Thesaurus Syriacus, Oxford 1868, c. 2020) is less suited to the context, cf. e.g. $\text{dw}$/ $\text{w}$ $\text{m\text{sknwth}}$/ $\text{w}$ $\text{byth}$ in Montgomery 34:2-3 (= Hamilton 6:2-3).

9 Drower-Macuch, p. 258.

11 Teixidor, p. 57 (= Hamilton, Text 15).

12 p. 122a-b.
If all of them represent the same name, Persian Babhai (?),\(^1\) we have here a case of laryngeal confusion (cf. below, p. 26-27); §w§ seems to indicate the fricative realisation of /b/ preceded by a vowel. Since the clients as a rule are identified in incantation bowls with their mother’s name,\(^2\) §b’wcy§ should be a female name, but in Hamilton 19:1 Babai is son of Mehanosh.\(^1\)

§§yyn bt gwñny§, both names occur also in other bowls.\(^3\)

§bt§ is probably a phonetic spelling instead of the proper Syriac §bît§; in Syriac incantation bowls §r§ occurs in the word “daughter” only in Montgomery 36:1,2.\(^4\)

§mhbdw§ = Persian Mahbôdh,\(^5\) §h§ pro §h§ is again a case of laryngeal confusion (cf. below, p. 26-27).

§mh’dwr$ = Persian MahaGar / MahaSar.\(^6\)

§gwñsp$ = Persian Guñnasp.\(^7\)

§gdhr$ "Gad has chosen"; Gad occurs in numerous Semitic languages as the name of a deity, "Tykhê", "Fortuna", as well as an appellative,\(^8\) and it is the Aramaic counterpart of the Persian Farn, Farrux\(^9\) found numerous in incantation bowls as the initial part of names; §bhira$ is a Mandaic malwaña name.\(^10\)

---

1 Justi, p. 54-55; according to Th. Nöldeke (Persische Studien, Sitzungsberichte der philosophisch-historischen Classe der Kaiserlichen Akademie der Wissenschaften, 116. Band, Wien 1888, p. 387-423) = "Väterchen" (p. 411, 414, 395, fn. 5), but cf. also Syriac §b’wy§ = Bôi, see idem, p. 412-413.
2 Montgomery, p. 49 & fn. 1; Yamauchi, p. 13; Drower, p. 26-27; see also the end of this list of names: "sons of Shishin".
3 See Montgomery, p. 280; Yamauchi, p. 371, 368; according to Nöldeke (p. 401) Syriac §gwñny§ is a compound with Persian guñnasp "stallion".
4 = Hamilton, Text 8, see also idem, p. 54 § 3.7.
5 Justi, p. 185. 6 idem, p. 184. 7 idem, p. 122, 354.
9 Justi, p. 494
10 Drower-Macuch, p. 53.
$\text{bnh}$ (pl. with suff. sg. 3. fem.) is either a phonetic spelling instead of the Syriac $\text{bnh}$ (read [bâneh]) or a Mandaism as proposed by Montgomery\(^1\). Cf. below, p. 26-27.

**Lines 3-4:**

$\text{rz szmy' b-smy' qbyr w-rz' r}^C \text{, b-'r}^C \text{, qbyr w-rzh d-byt'} \text{ hdyn}$\(^6\). In IM 23776:1 the incantation bowl is called $\text{szmy'}$ (mama $\text{hn' rz' w-htnt'} l-byth d-...$).\(^2\) Thus the phrase obviously refers to a microcosmos idea:

The bowl of the house is a miniature of the cosmic bowls buried in heaven and earth which preserve and maintain the order of elements.\(^3\) The burying of the bowls of heaven and earth in heaven, resp. earth implies by analogy that the bowl of the house was buried in the house, cf. above, p. 5, fn. 4.

$\text{hdyn}$ does not occur as a demonstrative pronoun in Syriac.\(^4\) Contrary to that, it is normal in Jewish Eastern Aramaic\(^5\) and in Jewish incantation bowls\(^6\), and in one Mandaic bowl it is spelled $\text{hadin}$; the true Mandaic form is $\text{hadin}$ which probably originated from $\text{hadin}$.\(^8\) Syntactically $\text{hdyn}$ is here a predicative, but $\text{ptgm' hdyn}$ (line 6), $\text{hn' qm}^C y'$ (line 1), and $\text{ptgm' hn'}$ (IMB, line 6\(^+\)) go to show that $\text{hdyn}$ is a pronoun without a specific difference from $\text{hn'}$.

$\text{'l}$\(^5\) (= Syriac $\text{'ell} \text{a'$}) indicates that the magic bowl has to bear an incantation, to bury a bowl whatsoever is not sufficient.

$\text{bhr}$ means either "sorceries" ($\text{hras}^e$) or "sorcerers" ($\text{hras}$).

---

1 Montgomery, p. 35 and 172.
2 Teixidor, p. 57 & fn. 8 (= Hamilton, Text 15).
4 But occurs in the parallel text, Montgomery 37:5 (= Hamilton, Text 9).
5 $\text{hadin}$, see Epstein, p. 23-24.
6 $\text{hdyn}$ in Montgomery 3:6, $\text{hdyn}$ in Montgomery 28:4.
7 Yamauchi, Text 32:52 (p. 294).
8 Macuch, p. 165 and 67.
A Syriac Incantation Bowl

Line 5:

$'sgnd'$ is the true Syriac form of this Iranian (?) loan word $'izgadda'$ which occurs also in Jewish Aramaic. However, Mandaic has retained the same form $sašganda$.

$'ptykr'$ is a spelling implying the same vocalization pattern which exists in Mandaic $p(a)tikra$ in contrast to Syriac and Jewish $ptakra$.

$gnd'$ is a similar case of non-assimilation as $'sgnd'$ above. /n/ of the original Pahlavi $gnd$ is assimilated in the standard Syriac $gudda$ but retained partly in Mandaic ($ganda$ / $gud$, $guda$) and Jewish Aramaic ($gudda$ / $güddå$). In Syriac bowls $gnd'$ occurs also in Montgomery's text 37:6 and according to Hamilton in Layard-Ellis.

Line 6:

$'yhl'$ is a variation of the Tetragrammaton $yəhw$. In IMB there is $'ylh'$, i.e. a combination of $Yah$ and $Allaha$, in Layard-Ellis possibly $'ylh$.

2 The Syriac and Jewish $'izgadda'$ is developed through the change of the initial [a] into [i] (followed by a sibilant, see Brockelmann, Syrische Grammatik, p. 35-36 § 58, $'izgadda'$ is attested in Syriac, see Brockelmann, Lexicon, p. 9) and the partial assimilation of [S] into the voiced [g], cf. Syriac $šušbānā$ realized as [šužbānā] in Eastern Syriac (Brockelmann, Grammatik, p. 19-20 § 29,2).

3 M. Jastrow, A Dictionary of the Targumim, the Talmud Babli and Yerushalmi, and the Midraschic Literature (Reprint, New York 1950), p. 46.

4 Drower-Macuch, p. 40.

5 idem, p. 366; Yamauchi, p. 366; Brockelmann, Lexicon, p. 617; Jastrow, p. 1254.

6 Brockelmann, Lexicon, p. 104.

7 Drower-Macuch, p. 84 and 82.

8 Jastrow, p. 223.

10 = Hamilton, Text 10:3.
"Allah", cf. above, p. 9, note 3 and fn. a. According to Hamilton $\gamma'h$s occurs also in Montgomery's text 31:6 (= Hamilton, Text 3). For other occurrences of the Tetragrammaton in Syriac bowls, see Hamilton, p. 185 (where $\gamma'h$s of Lidzbarski's bowl (1916) is lacking). Although Yah may be identified with "your Father who is in heaven" (line 9), we have to pay attention to "male gods and female ishtars" which are placed (almost, cf. $\gamma'm\omega's$ sg.) on a par with the Father (same line). Thus we can draw no conclusions from these passages concerning the religion of the sorcerer or clients, so with all the reason since $\gamma'ia$h$s is known also in the Mandaean religion as a deity who dispells evil spirits.¹

$\gamma'mqbyl y'h$s "accepts Yah" seems to refer to the acceptance of Yah as the protective power of the house, cf. Montgomery, Text 6:11: "And whoever will transgress against this press and does not accept these rites ($w'hlyn r'zyn l'$ $mqbyl$), shall split asunder violently...".

$\gamma'ml's$ (without medial $'s$) $r'z's$. $\gamma'ml's$ is probably a plural status constructus which, as in Mandaic,² is identical with status emphaticus as far as the spelling is concerned, at least. A similar case we have on line 8¹ of IMB, $\gamma'dyr'$ $byt's$ "occupants of the house", the counterpart of which in HB is, however, the genuine Syriac form $\gamma'dyry$ $byt's$.³

Line 7:
$\gamma'lyhwy$s (twice). Because there are vestiges of phonetic spellings in this

---
² $\gamma'yh$s as the protecting Lord occurs further in the Christian Syriac Book of Protection; Syriac Charms (ed. by H. Gollanz, London 1912), Codex C § 18, p. 86 / lxxxii.
³ $r'z's$ is spelled here with medial $'s$, cf. $rzs$, $rzhs$ on lines 3-4.
text (cf. below, p. 27), we could suspect that $hS$ (without *linea occultans*) may still have been pronounced in the dialect of the writer.

$\text{qd}hS$. In Aramaic the prepositions $\text{cl}$ and $\text{qd}h$ have parallel forms when extended by possessive suffixes. Thus the analogy of $\text{cl}$ly$S$ would demand $\text{qd}m\text{why}$, i.e. the true Syriac pattern. The nearest counterpart is again Mandaic, $\text{qd}mehS$.\(^1\) Also Jewish Aramaic discloses shortened forms ($\text{qmy}hs = \text{qam}meh$) side by side with longer ones ($\text{qd}m\text{why}$ = $\text{qd}m\text{ght}$).\(^2\)

Line 8:

$\text{lnm}S$, $S$ without *linea occultans* and possibly still pronounced,\(^3\) cf. $\text{cl}$ly$S$ above.

$h\text{w}S$ (twice and once on line 9) is either act. part. (= Syriac $h\text{we}$) used to substitute the future tense\(^4\) or the 3. pers. masc. personal pronoun used as a copula\(^5\) or, in this context less probably, pf. of the verb $\text{vhw}$ "he has become".\(^6\)

$m\text{rhyn}S$ = Syriac $\text{marby}\text{n}S$ "that which makes to grow, foster-father/mother"\(^7\) and Mandaic $\text{mrabiana}$ "fosterer, one who nurtures".\(^8\)

---

1 Drower-Macuch, p. 406; Macuch, p. 239.
2 Epstein, p. 136.
3 $S'$ is retained in Mandaic with consistency in the classical period, i.e. until the first half of the first Muslim century, see Macuch, p. 134 and lxv.
4 Cf. Montgomery 37:3 (= Hamilton 9:3): [w-kl d-'yt]lh w-d-hwn lh "and everything that belongs and will belong to (him)"; Th. Nöldeke, *Kurzgefasste syrische Grammatik* (Leipzig 1880), p. 187 $S$ 270, e.g. 'ayl$S$ d-men b'r$S$n $\text{haw}S$ "die welche nach uns sein werden". In Mandaic, however, act. part. $\text{hauia}$ occurs only in conditional clauses, see Macuch, p. 439.
5 According to Hamilton (p. 63) there are three variants of this pronoun in Syriac incantation texts: $\text{hwh}S$, $\text{hwh}S$, and $\text{hwhw}S$. Jewish Aramaic has similar variants: $\text{hwh}S$, $\text{hwh}S$, and $\text{hywh}S$, see Epstein, p. 20-21.
6 Cf. however, Mandaic, Th. Nöldeke, *Mandäische Grammatik* (Halle 1875), p. 369-370: "So wird nun auch $\text{hauia}$ oft als $\text{ye}G\text{ove} = \text{e}G\text{ove}$ gebraucht, besonders mit der Negation, ... e.g. ha$S$ d-ru$S$gan$S$ n$S$ n$S$ hua "jetzt, da mein Vertrauen auf das Leben ist".
7 Payne Smith, p. 298.
8 Drower-Macuch, p. 278.
Line 9:

$qbyr'$ is traditionally translated as "cattle" in bowl texts, and because in the Syriac Book of Protection (ed. by Gollanz) where so numerous objects have been dealt with there is no charm for a well (Syriac $bê'ra'$, $bîra'$), this interpretation seems to be preferable. In the same form, $bîra$ without the more original $c$, the word occurs in Mandaic.

$qd $b'$, cf. above, p. 15, $gdhr$.

$qblyw$. If the ending has been read correctly - it is rather faded in the bowl - the imperative would be that of the 2. pers. fem. sg. (referring to Shishin) with a 3. pers. masc. sg. obj. suff. attached (referring to "peace") and thus the spelling would be a phonetic one ($qabbêtiu) instead of the true Syriac $qblywhy$. However, in IMB its counterpart is $qblyw$, i.e. the normal Syriac imp. 2. masc. pl. without an object suffix. Consequently, it is more probable - also in regard to the context - that $qblyw$ is an unsuccessful attempt to follow the traditional spelling $qblyw$; the long final vowels were dropped from the pronunciation "schon vor der ältesten Literaturepoche" (i.e. 4th century AD), and thus the pl. imperative was realized as $qabbel$. In Classical Mandaic there is no special form for imp. pl.; however, Modern Mandaic has preserved lengthened pl. imperatives $barexyôn$, $barexyen$. Could $y$ of $qblyw$ have a connection with these lengthened forms?

For the idea of "acceptance", see above, p. 18, $mqbyl y'h$.

$q'bwkwn d-b-êmy'$ looks at the first glance like a Christian formula.

---

1 Montgomery, p. 284; Hamilton, p. 53.
2 Brockelmann, Lexicon, p. 56; Payne Smith, p. 34, 54.
3 Drower-Macuch, p. 62
"Well" is not mentioned in Mandaic incantation texts, see Yamauchi, Glossary A.
4 Brockelmann, Grammatik, p. 45 § 75.
5 Cf. Hamilton (p. 79) on $'nwn ytpqyd$ (Montgomery 35:6 = Hamilton 7:6): "Note that here the plural is expressed by the singular as sometimes happens in Syriac and Mandaic."
6 See Macuch, p. 257-258, 274-275, "preserved" is the wording of Macuch.
However, it is well attested in Palestinian Jewish Targums and in Gnostic and Mandaean texts various emanations and deities are called "Father".

$d-mšw$ is a spelling indicating the singular in genuine Syriac, at least (vs. pl. $mšw$), and thus it refers here and on line 10 to "your Father" only and not to other gods.

Line 10:

$smtql$, $\sqrt{\text{l}}$ af = "effect ut offenderet", "to let to fall (into sin)".

$hbl$ means either "injury, destruction" (= Syriac $ḥbāl'$) or "destroyer" (= Syriac $ḥabbāl'$).

For the contents of line 10, cf. Ginzā lāmān (ed. by J.H. Petermann, Thesaurus sive Liber Magnus vulgo "Liber Adami" appellatus, opus Mandaeorum summi ponderis, Lipsiae 1867), p. 8, lines 8-13: la tisigdun l-satāna l-pāṭikria u-l-yālomata u-l-t$\tilde{a}$ia u-$\tilde{y}g$hā d-hasin alma d-man d-sagīd l-satāna napil b-nura d-rāqda alma l-ɪw$ama d-dīna u-alma l-$\tilde{s}it$a ṣā'īra purqana u-alma d-ṣābiya malka rama d-nhura d-dā'īnun l-kulhun alma dā'īnun l-nišmata kul $\tilde{d}niš ka$ $\tilde{d}ubadi $ $\tilde{d}h$ "Do not worship Satan, idols and graven images and error and confusion of this world, because he who worships Satan will fall into the glowing fire up until the Day of Judgement, to the Hour, the hours of redemption, up until the time demanded by the Exalted King of Light, he who judges all the beings, judges the souls of all people according to the works of their hands."

For the Judgement ($b-dynh$), see also Montgomery, p. 135-136, Teixidor, p. 55, fn. 6, Rudolph (see below, fn. 2), p. 190, and below, p. 25.

Less probably of $\sqrt{\text{qly etpe/a. "to be fried, scorched"}}$, idem, p. 506.
Ginza citation.

$ddyn$. If these letters between the magic symbols represent a word (cf. INB where the letters $dd$ have diacritical dots of $d$ below them), it would be pl. st. abs. of $dådå$ "friend, uncle".

$'ntyn$ "you" fem. pl. Although all of the following demons are not of feminine gender, $n$ is retained in the spelling (cf. Syriac $'ntyn$ = ['atten]) in the same way as in Mandaic $anatun$ (masc., fem. $'natin$ is not attested). Also in Jewish Aramaic there is $'ntwn$ besides $'attu$ and $'attun$.

Line 11:

$nkwl$ is obviously a fem. plural of the Syriac word $nåkå/glå$ "deceptor", "crafty, wily, deceitful".

$ëyd$ vs. $ë'd$ on line 5. The former goes with Mandaic ($ëdå$) and Jewish Aramaic ($ëdå$, $ëdå$), and the latter with Syriac ($ëdå$, $ëdå$).

$pg$ = Syriac $pågÅ"hostile encounter, accident", cf. however, Mandaic $pigå$, $pigå$ "deaf-mute, dumb".

$l'tb$ = Mandaic $lå'å$ "no-good-one", "fiend".

$qrwt$ means according to Montgomery (p. 301 and 84), Teixidor, and Hamilton "(magical) invocation(s)" (a derivative of $qr$ "to call") which,

---

1 Realized as [anatton], *[anatten]. In Modern Mandaic, however, /n/ has been assimilated into /t/ and the results are [atton], [atten]. Macuch, p. 154.
2 Epstein, p. 21.
3 Brockelmann, Lexicon, p. 429.
5 Drower-Macuch, p. 460.
6 Jastrow, p. 1523.
7 Brockelmann, Lexicon, p. 748; Payne Smith, p. 553.
8 Payne Smith, p. 434; for "plague", see Montgomery, p. 92.
9 Used also of a kind of demon, Drower-Macuch, p. 370.
however, does not occur in Syriac dictionaries. On the support of the
Mandaic expression u-qiria u-nidria u-âšlamata (cited in Drower-Macuch,
p. 41, s.v. $âšlamata$) "and accidents and (evil?) vows and surrender-
ings (forfeitures)" I think that $qrw$t$'$ is the Syriac plural of $qeryå'$
in the sense "pollutio", "an effusion during sleep" from the root $qry$
"to happen", or more generally "an accident", cf. Mandaic $qoria$ "mis-
hap, strife, accident, accidental pollution, obstinacy, quarrel, dis-
pute". Syriac dictionaries do not mention a plural form of $qeryå'$,
but numerous Syriac nouns of this pattern (with yod as the third root
consonant) get a /w/ in the plural (e.g. $ôryå'$, pl. $ôrawwåtå'$); thus $qrw$t$'$ would be read $qrawwåtå$.

$zdnyt$'$, adj. pl. fem. = "impious, presumptuous, furious", cf. Mandaic
noria zadaniata. For the variation $zdnyt$' vs. $zydnyt$' in IMB, cf.
the Mandaic pair $zadana$ - $zidana$ and Jewish Aramaic $zâdånå'$, $zâdånå'$ "wilful, violent, tyrant". The word does not occur in Syriac
dictionaries.

$qll$t$'$ means in Syriac "opprobrium", "belittling, contempt, ignomity,
shame", cf., however, Mandaic $q(u)lala$ l "snare, trap".

The following two words are almost effaced in HB. However, the last
traces do not accord with their counterparts $d-b-zywn$ / $zdwn$ w-
$hïywn$ in IMB.

1 Brockelmann, Lexicon, p. 691; Payne Smith, p. 519.
2 Drower-Macuch, p. 412.

7 Payne Smith, p. 55.
"deserts from his Lord, he does not receive" possibly refers to line 6.

Line 14⁺:
$\text{slh}^*$ (also on line 15⁺). Spellings of Hebrew $\text{slâh}$ in Syriac bowls are $\text{slh}$ (the correct one), $\text{slh}^*$, $\text{sl'h}$, $\text{sl'hl}^*$, and $\text{sl'hlh}^*$. The vacillation testifies again to the instability of laryngeal consonants, cf. below, p. 26-27.

Line 15⁺:
$\text{'bdg...}$. The alphabet with a protective power and other final formulas are in agreement with those described by Lady Drower as occurring in magic rolls used still among Mandaeans. $\text{n}$ appears both in the initial-medial and final shape and $\text{t}$ similarly in the final and independent form.

Concluding Remarks

Linguistically the most interesting feature of this bowl text is the abundance of Mandaic vocabulary and forms. Words and patterns having exact parallels only in Mandaic are $\text{mdwrt'}$ (line 2), $\text{'sgnd'}^*$ (5), $\text{ptykr'}^*$ (5), $\text{byr'}^*$ (9), $\text{t'cb'}^*$ (11), $\text{zyln}'/\text{ydnt'}^*$ (11), and $\text{'lmt'}^*$ (12); $\text{gnd'}^*$ occurs also in Jewish Aramaic. In addition to them the spellings $\text{bnh}$ (2), $\text{qdmh}$ (7), and $\text{'zylw}$ (13⁺) are in accordance with the grammar of Mandaic but not of Syriac. Other phenomena pointing to Mandaic are the preservation of $\text{'}^*$ in $\text{1-} \text{'nsh}$ (8) and that of $\text{n}$ in $\text{'ntyn}$ (10) (cf. phonetic spellings below), the employment of alphabet (abaga) in the end of IMB, some Mandaic expressions ("victorious peace", "mighty mountains", "evil sea") as well as the rather numerous cases of laryngeal confusion: $\text{qm'y}$ (1), $\text{b'wy}$ (2), $\text{mbywa}$ (2),

---

1 Spelled so also in the bowl published by Lidzbarski (1916, p. 1214).
2 For the occurrences, see Hamilton, p. 191.
3 Drower, p. 26 and 240. The alphabet also brings the bowl text of Layard-Ellis (= Hamilton, Text 10) to an end; however, all of the letters have been repeated and $\text{t}$ is written four times in Layard-Ellis.
$byr'$ (9), $psw$ (12*), $slp$ (14*, 15*); however, the last phenomenon is shared with Jewish Aramaic.

An explanation of these Mandaicisms would be the hypothesis that the writer of the incantation was a Mandaean exorcist who attempted to write Syriac but was not always able to discern between genuine Syriac and his native Aramaic dialect. On the other hand, there are in this text words and forms occurring only in Syriac ($hn'$ (1), $nwkt'$ (11), $qrw$ (9, 11), $nwsy'$ (12), $brw't'$ (13*); $cmn'$ (7), masc. pl. ending $-'$) or in Jewish Aramaic ($hyn$ (3, 6), $nbdyn$ (12)). In addition, $'syw'$ (1), $by'n'$ (2), $'r'$ (4), and the verb $
u krz$ are Syriac and Jewish Aramaic but not Mandaic, similarly $npln$ (7, part. fem. pl.) and $'lmyyn$ (9, st. abs. pl. with a numeral) disagree with the morphology of Mandaic.

Thus another solution seems to be more probable. Phonetic spellings ($bt'$ 2, $ml'$ 7, $ytyb$ 7, $qbyw$ 9, $dykr'$ 11, $'d'$ 5 vs. $'yd'$ 11, etc.) indicate that the exorcist was not versed in the details of Syriac orthography, i.e. he wrote more or less as he spoke. If so, his dialect was not genuine Syriac, but a dialect which had much in common with Mandaic (and Jewish Aramaic). In an area (Central Mesopotamia) with a mixed population (cf. Persian proper names) and far from Syriac cultural centres such an amalgamation of closely related dialects (cf. Greek Koiné), especially in the field of vocabulary, appears more than likely.

Other Syriac bowl texts disclose similar deviations from Syriac vocabulary and morphology (cf. Hamilton's grammatical sketch, p. 51-94, and

1 Pro Mandaic $asuta$ (Drover-Macuch, p. 28), $bratg$ (idem, p. 70), $arqa$ (idem, p. 39).
2 Pro the Mandaic normal spelling $napqa$ realized, however, $nafqan$, see Macuch, p. 208, 48-49.
   For st. abs. pl. in Mandaic, see idem, p. 206-209, for nouns with numerals, idem, p. 414.
3 Lidzbarski 1916, p. 1218-1220.
glossary, p. 165-202). Also the textual properties of the incantations reflect the syncretistic nature of these bowl texts: formulas and names were rather freely borrowed from one religion and language to the other. Thus the dialectal interference is not limited to a certain type of Syriac type of text (HB, IMB, Montgomery 37, Layard-Ellis). It is quite possible that a linguistic study of Jewish and Mandaic incantation texts would reveal parallel proofs of the influence of Syriac on those dialects as well as of their mutual contacts. Similarly it would be profitable to examine which of the numerous alternative morphemes of Jewish Eastern Aramaic could be attributed to an amalgamation of Eastern Aramaic dialects.
Pl. 2, The Incantation Text of HB.
